

Prerequisite :

....nodejs Its

#####

Project setup

#####

1 : open visual studio

2 : browse to project folder

3 : To open terminal in VS code : on menu bar , select view -> Terminal

4 : enter 'npm install' // all dependencies will be installed automatically.

5 : Navigate to the project root folder ,type : nodemon server.js /// if it says connection successful

6 : open browser goto : <http://localhost:3000/index.html>

7 : add comment

8 : To test database :

- open atlas and check collections

9 : to test other routes use : PostMan

#####

ATLAS credentials :

#####

krypto609@gmail.com

pass\_word

ATLAS link : <https://account.mongodb.com/account/login>

#####

Postman routes:

#####

**To insert: use -json raw parameters**

method : post

{'name': "rrrrrr", "email": "hhhh", "message"}

**To get all comments: method get**

<http://localhost:3000/comments>

**To get specific comment:**

<http://localhost:3000/comments/commentid>

eg:

<http://localhost:3000/comments/5ec507f933e2e42e346f7dc2>

**Update and delete is also working**
